

Quantitative Usage Analysis for Diuron

Case No.: 46 PC Code: 35505
Date: 3-20-01 Analyst: Alan Halvorson

Based on available pesticide usage information for 1990 through 1999, total annual domestic usage of diuron is approximately 8 million pounds active ingredient (a.i.). In terms of pounds a.i., diuron usage is allocated to railroads (25%), oranges (15%), cotton (10%), seed crops (9%), sanitation/utilities (8%), industrial facilities/pipelines (7%), roadways (5%), grapefruit (3%), alfalfa (3%) and other sites (15%). Agricultural sites with more than one-fourth of their acreage treated are asparagus (53%), blackberries (53%), temples (51%), oranges (51%), grapefruit (47%), tangelos (47%), seed crops (44%), mint (41%), limes (33%), tangerines (30%), blueberries (29%) and lemons (26%). Important using states include California, Florida, Idaho, New York, Oregon, Pennsylvania, Texas and Washington. Per-acre rates for agricultural sites are generally less than 2 pounds a.i. per application and less than 3 pounds a.i. per year, while per-acre rates for non-agricultural sites are generally less than 6 pounds a.i. per application.

COLUMN HEADINGS

- Weighted average--the most recent years and more reliable data are weighted more heavily.
- Average application rates are calculated from the weighted averages.

NOTES ON TABLE DATA

- Usage data primarily cover 1990 - 1999.
- Calculations of the above numbers may not appear to agree because they are displayed as rounded.
- A dash (-) indicates that information on this site is NOT available in EPA sources or is insufficient.

CROP/SITE GROUPS AND ABBREVIATIONS

- Citrus, Other includes kumquats, limes, tangelos, tangerines, and temples.
- Pome Fruit, Other includes figs, kiwifruit, persimmons, pomegranates, carambolas, and papaya.
- Pasture/Rangeland, Other excludes cropland for pasture and pastured woodland.
- LCO = Lawn care operator
- LMC = Landscape maintenance contractor
- PCO = Pest control operator
- FH = For hire
- NfH = Not for hire
